

Software Developer - Job Description

SG Systems Global is looking to recruit / hire a Technical Support Engineer to provide enterprise-level assistance to our customers. You will diagnose and troubleshoot software and hardware problems and help our customers install applications and programs.

The role will require a solid foundation in Java programming skills with experience of writing and deploying code into real-time critical systems. We are an ever-growing company with what is currently an undersized team, as such the role provides ample opportunity for personal development and growth.

The core of the role will be continuing developing our current product range as well as taking the lead on new products in the pipeline. You will be writing software for touch screen, mobile and desktop devices. The role is remote, so you can work from anywhere. Additional perks include phone and internet costs will be covered.

To be qualified for this role, you should have an academic background or relevant job history in Computer Science or Software Engineering, be up to date on the latest technologies and have a strong desire to see your work deployed and running in factories across the globe.

Experience & Skills

Required

- Strong Java J2SE/J2EE skills
- Minimum 2 years' experience in industry
- SQL writing & RDBMS experience
- Fluent in English
